

# Conservation Development Design Workshop

Presented by: **Randall Arendt, FRTPI, ASLA**

**June 25<sup>th</sup> at the Pearl Brewery in San Antonio**  
**8:00 am to 3:30pm**

Taking place at the newly transformed Pearl Brewery in San Antonio, this hands-on workshop will feature acclaimed expert Randall Arendt, a premier professional in conservation development design. Join us as we explore how conservation subdivisions can accommodate profitable development while maintaining the intrinsic values of the natural and rural landscape.

The presentation and planning exercise will demonstrate practical, easy-to-use techniques to enable developers and property owners to work together to accomplish their respective objectives of implementing full-density residential subdivisions in such a way that helps to build a community-wide network of productive and protected conservation land.

With today's movement towards thoughtful development, this workshop will be useful for property owners, regulatory state and public officials, design, planning, development and real estate professionals and the community at large targeted towards the planning and design of Conservation Subdivisions.
